

FABRIC GIFT BOX

Piece A cut out:
 1 outer fabric
 1 inner fabric
 1 lightweight buckram
 2 fusible webbing

Piece B cut out:
 2 outer fabric
 2 inner fabric
 2 fusible webbing

If you've never used fusible webbing refer to the manufacturer's instructions.

How To:

Iron fusible webbing to the wrong side of your outer fabric. Then iron fusible webbing to the wrong side of the inner fabric of piece A.

Remove the paper from the webbing and iron the outer fabric piece to the buckram. On the opposite side of the buckram remove the paper and iron on the inner fabric piece.

Next using fusible webbing, iron together a piece of outer fabric to one side of inner fabric of B, wrong sides facing, then repeat to make a set of two.

Using the dotted lines (.....) of the pattern A as a guide, fold the fabric and make a sharp crease.

Then stitch the sides (B pattern) to piece A with wrong sides facing (the seams will be on the outside). Match the letters up as a guide. The bottom of each side panel is easiest to hand stitch, the corners of the box bottom are awkward to stitch on a machine.

Lastly hand stitch on a snap to close.

Alternatively, cut the box out in a one-piece cross shape by taping pattern part B to A at the red lines. Fold at the red lines and follow all instructions for assembling for piece A. This will make stiffer box sides but eliminate the need to hand stitch the base. (I like to cut sides separately to save fabric.)
